

ARI STORMWATER FILTRATION DEVICE (SFD)

The only high flow to fine particle
capture filtration technology available

Remove waste, toxins and biohazards 'at source'.

Stop stormwater runoff adversely impacting our urban waterways & oceans.

Only proven 'at source' filtration

The SFD is lined with the innovative ARI filtration material.

This unique combination captures 95% of the physical waste and filters the water of particulates to 63 microns without impacting drain functionality or flow rates.

ARI Material has been rigorously tested in the field, scientifically proven to the highest standards, winning multiple industry awards.

Remove waste and pollutants

The SFD prevents waste from entering our waterways and ocean.

The physical waste & sediment is captured at source, stopping them from entering the drainage infrastructure altogether.

The SFD can be fitted with an optional ARI Pillow which successfully polishes stormwater of hydrocarbons, heavy metals & PFAS.

Easy to install and maintain

The SFD is a 'drop-in lift-out' device that is easy to retrofit into existing drains.

Each SFD is tailored to suit the drain and features metal components made from long-lasting 316 Marine Grade Stainless Steel.

The 'drop-in lift-out' design makes servicing quick and easy reducing maintenance times and costs.
