

# ARI WASH BAY DEVICE

## HIGH FLOW MICRO FILTRATION

Up to 3080 litres per minute, per square metre,  
filtering particulates at 63µm

Protect your investment, reduce maintenance and save on treatment costs with this state of the art filtration system

### Protect your equipment

The Wash Bay Device (WBD) is your first line of defence against physical waste entering your drain & filtration system.

Rigorously tested, this innovative filter captures particles as small as 63µm, ensuring comprehensive protection for your system.

### Protect the environment

90% of Australian wash bays are connected directly to stormwater infrastructure. The WBD captures the physical waste preventing system contamination.

This allows reliable water recycling while protecting the filtration equipment.

### Easy fitting & maintenance

The WBD products retrofit into existing drains with a "drop in - lift out" feature.

This easy to use design ensures that maintenance is straightforward and cost effective and also maximises your operational uptime.
